

Prescription Solutions® Specialty Pharmacy

Our Specialty Pharmacy provides patients with comprehensive and coordinated delivery and support services related to high-cost oral or injectable medications, which are used to treat complex chronic conditions. We are your single source for high-touch patient care management to control side effects, patient support and education to ensure compliance or continued treatment analysis, and specialized handling and distribution of medications directly to the patient or care provider. Specialty medications may be covered under either the medical or pharmacy benefit.

TABLOID

Characteristics of Specialty Medications

“Specialty” medications are defined as high-cost oral or injectable medications used to treat complex chronic conditions. These are highly complex medications, typically biology-based, that structurally mimic compounds found within the body. High-touch patient care management is usually required to control side effects and ensure compliance. Specialized handling and distribution are also necessary to ensure appropriate medication administration. Medications may have at least one of the following characteristics in order to be classified as a specialty medication by Prescription Solutions.

High Cost

- High-cost medications that typically cost more than \$1,000 per 30-day supply; including self-administered injectables, professionally-administered injectables/infusions, and oral medications

High Complexity

- Biotechnology products¹
- Orphan or Ultra-Orphan drugs
- Medications that are included in a specialty therapeutic drug class strategy

High Touch

- Medications that require temperature control or other special handling/shipping requirements (i.e. refrigerated or frozen shipping)
- Medications that require ongoing drug management by a pharmacist and/or physician specializing in treating the members' condition
- Medications that require focused, in-depth member education, compliance monitoring, side effect management and, often, injection technique education
